

- Agricultural and Technical use:
 - Fabrics for planting vegetation as slope protection
 - Fabrics as a protection against erosion in roadworks
 - Fabrics in car and aircraft construction
 - Fabrics as reinforcement in carpeting and upholsteries...

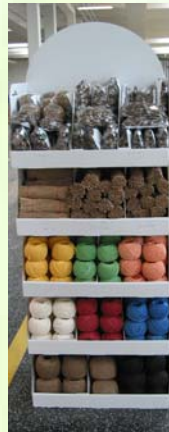

Biologically degradable mulching paper and tiles

Our mulching paper and tiles can be mixed in the ground after the harvest and rot in a few weeks. Unlike plastic film used until now, no hazardous waste is produced by our products.

plantoBio displays:

In addition to all of this, displays are obtainable and will be sended, if wanted, ready for sale. Our Displays „time to tie“ or „bio-pots“ are only a few examples of the countless possibilities.

In developing these high-tech ecological materials our Austrian company cooperates extensively with well reputed universities in Austria and Germany.
